Dear Client:

If you will be supplying Rx lenses to receive your Irlen Spectral Filter, this letter is to provide guidance for you and your eye care professional in the selection of your Rx lenses. **The Irlen Institute does not accept responsibility for replacing any client-supplied Rx lenses which are untintable.**

The preferred material for Rx lenses is a tintable hard resin plastic (CR39) with no UV, anti-reflective glare, or scratch coatings.

We understand that all **progressive** no-line multi-focal lenses come with the manufacturer's factory scratch coating and all **hi-index** lenses comes with the manufacturer's factory scratch coating and UV400 filtering. These lenses will generally tint successfully depending on the density/darkness of the filter combination.

LensCrafters and Costco normally provide the Dura Lens with a factory scratch coating that is not tintable. Make sure you request and receive tintable lenses.

Polycarbonate or Trivex lenses will generally not tint well; however, if you must use a high impact resistant lens, trivex will have a better chance of tinting successfully. Be sure to request a tintable trivex. **Trivex can also be used for drill hole mounted rimless frames.**

For **grooved lenses and rimless frames**, including Rimlon Rimless, Drill Hole Mounted lenses and **grooved lens mountings having full metal and plastic frames**, send only unmounted lenses. **Do not send the frame.** Your eye care professional can mount the lenses in the frame after they have been tinted and returned to you. **For drill hole mounted frames, trivex is the preferred lens choice over polycarbonate because the trivex lens will maintain the spectral filter longer.**

Please have your eye care professional identify the type of Rx lenses being sent by checking the appropriate items below and signing the form. **This form should be submitted with your lenses.** If there are any questions, please call the Irlen Center San Bernardino email to lab@irlen.com.
